

BUSINESS INTELLIGENCE PORTAL

Private AI grounded in your documents, databases, and SOPs

WHAT IS LUMIS INSIGHT?

A secure internal chat interface that answers staff questions from your own documents and databases — not the internet. Your data never leaves your network. No subscriptions. No per-user fees.

01

Document Intelligence

Upload PDFs, Word docs, and CSVs. LUMIS chunks and indexes them so staff query document content in plain English.

03

Role-Based Access

5 configurable permission levels. Each role gets a custom data scope and system prompt. Gated at every layer.

05

Full Audit Logging

Every query logged: user, question, context used, response. Full forensic trail for compliance and monitoring.

02

Live Database Queries

Connect to your MySQL databases. LUMIS pulls relevant records at query time — orders, inventory, CRM, and more.

04

Zero Cloud Exposure

No data leaves your network. Runs on your hardware, uses a local LLM, answers from your data only.

06

Laravel Portal Ready

Integrates as a module into your existing portal. Blade UI, auth integration, existing roles — no rebuild needed.

Ready to put your data to work? **Book a free 15-min LUMIS Audit.**
